# EXECUTIVE SUMMARY REPORT

## Belleville Middle/High School

8/4/2017

---

### What's New?

The first day of school is approaching quickly but the team is working together to make sure that everything is ready for students and staff to arrive! On the exterior, the brick veneer has been completed on both the new addition and new staircase at the front entrance of the high school. Ballast is currently being vacuumed off the roof and the new roof will be completed in the next couple of days. On the inside, casework is being installed and will be completed by the end of next week. Tile is being set in the front bathroom, and the bathrooms in the new addition will soon receive tiles in the upcoming week. While on the topic of floor coverings, the conference room has already received its carpet and the secure entry will receive carpet soon. With window and door frames installed around the school the newly renovated areas are really beginning to take shape!

*Shown below is a picture of the reception desk, it will be one of the first things visitors see when they enter the school!*

### The Past Week

- Complete interior block
- Set window and door frames
- Complete brick veneer on addition
- Install casework
- Patch fireproofing
- Hang duct in technology education areas
- Lay tile in secure entry bathroom
- Install flooring in conference area
- Set flag poles
- Pour stoops and slab in concession area

### Coming Up in the Week Ahead

- Finish coat of paint in conference and secure entry areas
- Install car hoist
- Continue setting frames
- Pave Hayden drive
- Begin laying block for retaining wall
- Begin polishing concrete in technology education areas

**Did you know?** Asphalt is America's most recycled building material, it is recycled at a rate of 80%. Since 1970, emissions from the asphalt industry have decreased by almost 100% while output has increased by 250%. This means that the process of producing recycled asphalt has almost no negative effects on our environment! What is even more interesting is that recycled asphalt is actually more durable and of a higher quality than virgin asphalt.
